Ultrasound Data: Will be available March 7th.

Directions to Sale:

From I-70 and Victoria Interchange: 8 miles north to (T) in road, 1 mile east to (T) in road, 1 mile north until road turns east, 2 miles east to Blue Hill School, ¼ mile north to Dickinson Ranch sign on east side of the road.

From Natoma on Hwy 18: South of town 9 miles until road turns west, 3 miles west to (T) in road, 1 ¼ miles south to Dickinson Ranch sign on east side of the road.

We do not spend much time pampering and showcasing "the look" of our cattle as we expect our stock to go out and work for us. Our cows are pastured and graze year round receiving minimal supplements without any hay, grain or cubed feed. In addition to being raised and bred to be rugged, we still strive to provide phenotypically eye appealing stock. Come take a look for yourself on sale day!

Dear Friends,

Welcome to our 46th Production Sale! Thank you for taking the time to evaluate our breeding program philosophy in maintaining a low cost, functional cow herd. For those who know our program and have purchased our genetics, we thank you for your confidence in our cattle. For those who are just starting to follow our breeding program, we want to show you what our cattle can do; please feel free to call or stop by to visit anytime throughout the year.

Due to the drought, the bulls and heifers were weaned on September 24th and were put on a ground hay ration for 30 days. The first of December, they were started on a four-step ration of wet distillers, sorghum silage, ground hay, and 5 pounds of corn. They have gained very well and are expressing growth without putting on excess fat. We strive to produce functional cattle that will hold up during the breeding season and beyond. The cattle look exceptionally good and are functional as assured.

We collected cow weights, hip height, and body conditions scores 30 days after weaning the calves this fall. We will submit these numbers to ASA, along with each cow's DNA to help correlate cow size and condition to calf weaning weight. The first calf heifers, the letter "C" cows, averaged 1000 pounds. The three and four-year-old cows, the letter "B" and "A" cows respectively, averaged 1150 pounds, while the five-year-old cows, the letter "Z", averaged 1125 pounds. The first calf heifer's calves weaning weights ranged from 500 to 600 pounds, which is still 50% or more of their body weight. They accomplished this without being fed any processed feed or grain. Although we might not have the biggest weaning weights, our efficiency is the same or better. The best defense against low prices is to be able to be a low cost producer.

We are excited about the way our steers have fed out the past two years as they have graded 96% choice or higher. They were fed a high roughage ration and were not implanted. Seven out of the twelve prime carcasses were red steers and four out of the seven were purebred Simmental. Several Certified Angus Beef carcasses were purebred or high percentage Simmentals. Additionally, we continue to sell butcher beef throughout the year and repeatedly receive compliments on how tender and flavorful the meat is.

We know that our cattle will work from birth to the rail, and our heifers will be efficient as well as low cost cows. We continue to push our cows to function on our resources with limited protein or supplements without hay or processed feeds. You will find new sire groups this year as we strive to incorporate new genetics into our program. So far, we are quite satisfied with how they have calved, performed, and how good their dispositions are.

We know that national cow herds have expanded and that cattle prices declined, therefore, producers need to be more efficient and cost effective. We believe the genetics that we have to offer will help you save costs on the female side by passing on the efficiencies that we breed into them to your herds. On the bull side, we feel that we are doing the same by siring calves that come easy with no hassle, wean off heavy, and perform on the rail.

As always if you need help selecting cattle, feel free to give us a call. We hope to see you on sale day! If you cannot make it to the ranch on March 17, 2018, we would be more than happy to help you bid on the phone or make arrangements for someone to handle your bid!

Sincerely,

The Dickinson Family

General Sales Information

Terms and Conditions of Sale

Insurance of Purchase and Risk

Each animal becomes the property of the purchaser as soon as it is sold; it shall be the obligation of the seller to see that animals are fed and cared for free of charge to purchaser until loaded after the sale. Arrangements will be made to have insurance available when making settlement.

Terms and Bidding

Terms of sale are cash or check to the clerk at the conclusion of the auction. Each animal will be sold to the highest bidder. The auctioneer in charge will settle any disputes between two bids and his decision shall be final.

Health

Each bull sold will be tested for brucellosis and TB no sooner than 24 days prior to the sale date, and proper certificates will be furnished to purchaser guaranteeing the animals sold are free from such diseases. All bulls are fertility examined and guaranteed breeders. Fertility guarantee and scrotal measurements will be furnished to buyer.

Registration and Transfers

All animals have record papers and these will be transferred to purchaser. Record information not in this catalog at press time will be supplied from the auction stand.

Announcements and Sale Day Supplement

Printed material on the sale day supplement takes precedence over printed matter in this catalog. Announcements from the auction block will take precedence over printed matter on the sale day supplement or in the catalog. All animals will be sold by lot number as announced by the auctioneer. Every effort has been made to assure correctness of the catalog. In most cases, information quoted concerning the animals has been taken from the respective breed association's official records.

Personal Liability

All persons who attend the sale do so at their own risk and the owners assume no liability, legal or otherwise, for any accident which may occur.

Identification

Seller offers each animal with the readable tattoo corresponding to its catalog designation and registration when applicable.

Breeding Guarantee and Definitions

1. All bulls are guaranteed to be breeders with the exception of: A) Injury or disease occurring to the animal after time of sale; B) Gross negligence or willful misconduct on the part of the purchaser; or C) Animals shown competitively after being purchased from Dickinson Ranch.
2. Bulls are guaranteed breeders if not allowed to run with the herd until at least 14 months of age and either: A) Settles 1/3 or more of the healthy cows he serves; B) Is the sire of 20 or more animals; or C) Settles cows by natural service and passes a fertility test administered by Dickinson Ranch consulting veterinarian during any 6 months trial (provided for in Paragraph 2 of the section titled "Options and Privileges of Return or Adjustment" in these terms and conditions) shall be considered a breeder. Any guarantee with respect to the ability to freeze semen shall be made by separate agreement between the Purchaser and Seller.
3. Females are guaranteed to be breeders with the exception of: A) Female calves sold at side of dam; B) Injury or disease occurring to the animal after time of sale; C) Gross negligence or willful misconduct on the part of the purchaser; D) Females used in ovum transplant after time

of sale; E) Females shown competitively after time of sale; F) Cows sold with calf at side that calves after sale to a breeding prior to the date of sale.

Seller's Semen Right

1. Seller reserves the right to keep a breeding interest with/without possession in any bull so designated in this catalog or during the auction. Future semen collections of the bull must be made known to all owners. These collections and costs will be divided according to each owner's interest, unless otherwise mutually agreed upon by all owners.
2. On any and all other bulls in the sale which are collected in the future, Seller reserves the right to 100 vials of semen with registration rights and will pay his portion of the collection costs.

Options and Privileges of Return or Adjustment

1. The following adjustments do not preclude the right of the Purchaser and Seller to mutually agree upon other terms and conditions for settlement of any dispute. All claims for adjustment or refund must be made in writing either within six months from the date of sale or no later than when the animal reaches 24 months of age, whichever occurs later, with the expectation of claims involving parentage of defects.
2. All returns or refunds will be paid in the form of a credit.
 - a. This credit will be limited to the purchase price less the salvage value of the animal and usage fees.
 - i. Salvage value =Market price x greater of sale day weight as listed in this catalog or current weight.
 - ii. Usage fee is set at 25% of purchase value of the animal for each season of use.
3. In the event an animal is claimed to be a non-breeder, the animal may be returned to the ranch of the Seller at Purchaser's expense if in good physical condition and the return is in compliance with the health requirements of the Seller's state. The Seller shall be entitled to a six month trial period following the return of the animal in which to prove that the animal is a breeder. If at the end of six months the seller is unable to prove the animal is a breeder, the seller shall, at the option of the Purchaser, replace the animal with another of equal value or grant the Purchaser a credit on any products marketed by Seller. Either of these options shall be deemed full satisfaction and settlement. If the Seller proved the animal to be a breeder, it shall be the obligation of the Purchaser to take delivery of the animal and pay all expense incurred for transportation. The Dickinson Ranch consulting veterinarian will make the determination of breeder or non-breeder.

Rights and Obligations

The above terms and conditions of sale shall constitute a contract between the buyer and seller of each animal and shall be equally binding on both. Animals resold following purchase in this sale shall constitute a separate transaction and the rights and obligations of the parties connected thereto are not covered by the above terms and conditions. Neither the owners, auctioneers, or any other person connected with the management or conduct of this sale assumes any liability, legal or otherwise, except as set forth in these terms and conditions.

QUICK GUIDE to ASA EPDs and \$ INDEXES

Expected Progeny Differences (EPDs): EPDs are the most accurate and effective tool available for comparing genetic levels. In using EPDs, the difference between two sires' EPDs represents the unit difference expected in the performance of their progeny. For example, if sires A and B have EPDs of +10 and -5, a 15-unit difference would be expected in their progeny (moving from -5 to +10 yields 15 units). Key to using EPDs is knowing what units they are expressed in. For example, if the above case referred to weaning weight EPDs, A would be expected to sire 15-pounds more weaning weight than B. If calving ease were the trait, A would be expected to sire 15-percent more unassisted births in first-calf heifers; in other words, if B sired 30 assists in a group of 100 heifers, we'd expect A to require 15 assists. A percentile-ranking chart is required to determine where a bull's EPDs rank him relative to other bulls in the breed. For percentile rankings or more detailed information about EPDs and \$ indexes visit www.simmental.org. Listed below are the units ASA EPDs are expressed in:

- All-Purpose Index (API): Dollars per cow exposed under an all-purpose-sire scenario. (See below for more details.)
- Back Fat (BF): Inches of backfat.
- Birth Weight (BW): Pounds of birth weight.
- Calving Ease (CE): Percent of unassisted births when used on heifers.
- Carcass Weight (CW): Pounds of carcass weight.
- Maternal Calving Ease (MCE): Percent of unassisted births in first-calving daughters.
- Milk (MLK): Pounds of weaning weight due to milk.
- Marbling (MRB): Marbling score.
- Maternal Weaning Weight (MWW): Pounds of weaning weight due to milk and growth.
- Ribeye Area (REA): Square inches of ribeye.
- Stayability (STAY): Percent of daughters remaining in the cowherd at 6 years of age.
- Terminal Index (TI): Dollars per cow exposed under a terminal-sire scenario. (See below for more details.)
- Weaning Weight (WW): Pounds of weaning weight.
- Yearling Weight (YW): Pounds of yearling weight.
- Yield Grade (YG): Yield grade score.

\$ Indexes: Though EPDs allow for the comparison of genetic levels for many economically important traits, they only provide a piece of the economic puzzle. That's where \$ indexes come in. Through well-conceived, rigorous mathematical computation, \$ indexes blend EPDs and economics to estimate an animal's overall impact on your bottom line. The same technology that led to the dramatic progress in swine, poultry and dairy genetics over the last several decades was used to develop the following \$ indexes:

- All-Purpose Index (API): Evaluates sires for use on the entire cow herd (bred to both Angus first-calf heifers and mature cows) with the portion of their daughters required to maintain herd size retained and the remaining heifers and steers put on feed and sold grade and yield.
- Terminal Index (TI): Evaluates sire for use on mature Angus cows with all offspring put on feed and sold grade and yield.

Using API and TI: First, determine which index to use; if you're keeping replacements use API, if not, TI. Then, just as with EPDs, zero in on the unit difference between bulls. (As described above, index units are in dollars per cow exposed.) The difference can be used to determine how much a bull is worth compared to another. Or, put another way, how much you can pay for one bull compared to another. For example, when buying an all-purpose-type sire, you can quickly figure a bull scoring +100 for API is worth an extra \$6,000 over a +50 bull if both are exposed to 30 cows over 4 years (\$50 diff. x 30 hd. x 4 yr. = \$6,000). A percentile-ranking chart is required to determine where a bull's index value ranks him relative to other bulls in the breed. For percentile rankings or more detailed information about EPDs and \$ indexes

Fishbacher's cattle on grass in Texas

"Our first purchase from Dickinson Ranch was a show heifer in 2014. In 2015 we bought a herd bull and two more heifers since then. My cowherd goal is to make Simangus cattle graze the entire year, without purchasing hay. That is why I choose Dickinson Ranch since they make their cows graze and perform in a harsh environment. The bull is very sound and athletic and his calves have outperformed A.I. calves that had a better growth E.P.D. The females we purchased are easy keepers that will all calve in the first month of my calving season."

~Marcel Fischbacher
Dumas, Texas

More than just a bull...

By Marty Ropp

I'm just buying a bull....right?

Most of us don't really believe that, yet the gravity of the decisions associated with selecting the next generation of seed stock may be greater than you first think. All of us consider the calves these bulls might sire and the value they should return to the ranch. Most consider pricing bulls based on a projection of years of service hopefully 4-8 years barring injury and the calf performance we might expect them to sire. If you don't keep your own replacement heifers, this makes some sense. If like most you keep females, the long term effects of this year's buying decisions on ranch profitability may not be quite as obvious until we break it down based on the long term maternal value traits we are purchasing.

- Let's assume your operation purchases 4 bulls this coming spring of 2018.
- First calves born in spring of 2019
- First daughters calving in spring of 2021 (First granddaughters calve in 2023)
- With any luck at 2 or more of these bulls are still breeding at age 7 (2024)
- Last calves born sired by these bulls in 2025
- Last calf crop females have their first calves in 2027 (Their first daughters calve in 2029)
- In 2028 a substantial share of the 2-7 year old cows are daughters of the bulls purchased 10 years before.
- In the year 2036 there are still a few 11 and 12 year old daughters in your herd sired by the 2018 purchased bulls.
- In the year 2036 the granddaughters and great granddaughters of the bulls purchased 18 years ago still make up a substantial portion of the genetics of your herd.

I know, most of us don't like to think about the year 2036. Seems like the Bi-Centennial was just a few years ago... If however your plans are to keep or make the beef business an important part of your families livelihood as far out as 2036, which most of us do, the bulls you purchase this year will still be an important piece of the profits you enjoy or the challenges you are still working through nearly 20 years from now. Sire selection is that important, so use all the tools available to make the best decisions you can every time!

So, if you would like to see a snap-shot of your cow herd 10-20 years from now in 2036, you need only spend some time with the seedstock herd you purchase bulls from. With the exception of a few differences created by environment, what you see is where you are headed! The size, disposition, body condition, udders, feet, calving ease, fertility, longevity, etc of your future cow herd is right there to see. Not just the mature cows either, make sure you look at the 2 and 3 year olds too and consider the direction your source is moving. That is why it is so crucial to choose a seedstock source that is headed where you want and need to be.

DRRA MS CANYON 181K

Notes:The Premier bulls out of 72R could work on heifers.

We've enjoyed meeting new people and sharing our story at the Kansas Cattle Drive in Buhler the last three years. Look us up next year!
